Career Objective

Motivated Java Developer with a strong foundation in Spring Boot, RESTful API development, and backend systems design. Passionate about building scalable, highly available microservices and eager to apply cloud technologies like AWS in real-world applications. Seeking an opportunity to contribute to robust software solutions while continuously enhancing technical and architectural skills.

Education

Pranveer Singh Institute of Technology, Kanpur B.Tech in Computer Science Engineering, Percentage: 76.5% (till 5th semester)	2023 – Present
Delhi Public School, Sonipat Intermediate, Percentage: 81.2%	2021 – 2022
Delhi Public School, Sonipat High School, Percentage: 77.6%	2019 – 2020

Skills

- **Programming Languages:** Java, SQL, JavaScript
- **Frontend Technologies:** HTML, CSS, React.js
- **Backend Technologies:** Spring Boot, Spring AI, REST APIs, JWT Authentication, JPA/Hibernate
- **Core Computer Science:** Data Structures & Algorithms, Object-Oriented Programming (OOP)
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, Eclipse, MySQL
- **Soft Skills:** Communication, Team Collaboration, Time Management, Analytical Thinking

Projects

Health Report Analyzer <i>Java, Spring Boot, Spring AI, React.js, MySQL</i> Major	2026 – Ongoing
• Developing a cloud-integrated healthcare system for secure storage, analysis, and management of patient health reports. • Built scalable RESTful APIs using Spring Boot to enable seamless communication between frontend and backend services. • Integrating AI-based analysis to extract insights and detect patterns from medical reports for improved decision support.	
ParkEase – Smart Parking System <i>Java, Spring Boot, React.js, MySQL</i>	Oct 2025 – Dec 2025
• Built ParkEase, a smart parking system with real-time booking and admin management; designed RESTful APIs supporting User, Owner, and Admin modules with role-based access control. • Implemented JWT authentication and RBAC for secure multi-role access control, ensuring safe API communication. • Managed and analyzed user activity logs (bookings, payments, session data) to derive actionable insights for improving user engagement and system performance. • Integrated React.js frontend with Spring Boot backend, gaining experience in the complete request-response lifecycle and API contract design.	
Sorting Visualizer <i>JavaScript, HTML, CSS</i>	Aug 2024 – Sep 2024
• Developed an interactive web application to visualize sorting algorithms with step-by-step execution. • Implemented Bubble, Selection, and Insertion Sort with dynamic animations to enhance algorithm understanding. • Visualized time complexity and performance differences using real-time data representation. • Improved user experience by adding controls for speed adjustment, input size, and algorithm selection.	

Certificates

- **Problem Solving (Basics)** by HackerRank
- **Programming in Java** by NPTEL
- **Web Development** by Udemy
